Global NCAP - Zero Stars

Renault Kwid

Delhi, 24.05.2016, 20:21 Time

USPA NEWS - The Renault Kwid was tested in three versions, including one with airbags, but each was rated as zero star for adult safety. The collapse of the structure in the passenger compartment and the lack of airbags explained the poor result.

Commenting on the latest crash test results, David Ward, Secretary General of Global NCAP said,

"The latest SaferCarsforIndia results show how important it is for cars to have a body shell that can remain stable in a crash. This is an absolutely crucial pre-requisite for occupant safety together with fitment at least of front air bags. It is very surprising that a manufacturer like Renault introduced the Kwid initially lacking this essential feature. Global NCAP strongly believes that no manufacturer anywhere in the world should be developing new models that are so clearly sub-standard. Car makers must ensure that their new models pass the UN's minimum crash test regulations, and support use of an airbag.

"We welcome Renault's efforts to correct this and we look forward to testing another improved version with airbags. Renault has a strong record of achievement in safety in Europe and it should offer the same commitment to its customers in India."[2]

Speaking during the Indian Automobile Safety Conference hosted by IRTE in Faridabad, Ward continued,

"The results highlight the importance of the Indian Government's decision to mandate front and side impact crash tests from October 2017. Legislative action is needed to ensure that the minimum levels of occupant protection recommended by the United Nations are guaranteed for Indian consumers. But manufacturers don't have to wait for legislation and we urge them to act to eliminate all zero star cars from production as soon as possible.

"Global NCAP also welcomes the forthcoming launch of a Bharat New Car Assessment Programme which can help build a market for safer cars in India."[?]

Renault Kwid

Global NCAP tested the standard version of the Kwid without airbags. It scored zero stars in adult occupant protection and two stars in child occupant protection. The collapse of the structure in the passenger compartment and the lack of airbags explained the poor result.

Following safety improvements Renault proposed that Global NCAP test an updated evolution of the Kwid in production from early April 2016. The car was tested with and without an airbag.

The new Kwid without an airbag scored zero stars in the adult occupant protection and two stars in child occupant protection. The structure did not collapse however it was rated as unstable and that it could not withstand further loadings. It was possible to see the structural reinforcements implemented in this version of the Kwid but when Global NCAP checked the left (passenger) side, there were no reinforcements. The structure was reinforced only on the driver side.

The new Kwid with the addition of driver airbag was also tested. This version also scored zero stars in the adult occupant protection and two stars in child occupant protection. The structure was the same as the new KWID without airbags but a high compression in the dummy chest area explains the low score.

Renault has confirmed that they will implement further improvements to the KWID and Global NCAP will test these new evolutions in forthcoming crash tests.
